

PROJECT

Cornhole Boards

This classic backyard game is perfect for everyone to spend a great afternoon outside. Building a set of two boards is easy. You can customize them with paint to show your creativity.

MATERIALS

4-2"x4"x8ft
2-2 ft x4 ft plywood
32-3" construction screws
4-1/4" bolts
4-1/4" nuts

TOOLS

Jig saw
Drill
Miter saw
Measuring tape
Compass
Pencil

01

Cut the 2x4 boards into four 21" for the base width, four 48" for the base length and four 12" for the legs. Build two rectangular frames, each with two 21" and two 48" and screw them together with 2 wood screws per side.

02

Cut the top. Mark the 2 ft x 4 ft piece of plywood 12" from a side edge and 9" from the top edge. With a compass draw a circle 6" diameter. Drill a pilot hole inside the perimeter of the circle and cut out the hole using the jig saw.

03

Attach the top to the frame using wood screws.
Tip: Predrilling the holes prevents the wood from splitting when screwing in the wood screws

04

Make the legs. Measure 1 3/4" from the top of the boards and draw a line across. Using a compass draw a 3 1/2" semi-circle. Use a jig saw to make the cut. Drill a 3/8" hole in each leg at the center of the line.

05

Flip the board facedown. Place a leg in each of the corners with the rounded edge toward the corner. Use the hole on the leg as a guide to drill through the frame. Make sure there is enough clearance for the leg to rotate. Attach legs to frame using bolts and nuts.

Challenge your friends to a game of cornhole and take advantage of your lawn.
