

LAWN CENTRAL

Installing Your New Sod

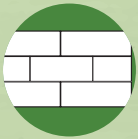

Install the sod immediately.

Remember SOD is a live plant and needs to get installed as soon as it arrives.

Start laying the sod along a straight line.

- Along a patio, a fence, flower bed or driveway
- Butt edges together tightly, avoiding overlap or gaps.

Stagger the joints in each row in a brick-like fashion.

Use a sharp knife to trim corners.

- You'll need a knife (carpet knives are perfect) to trim around trees, sprinklers, etc.
- A lawn edger is a handy tool as well to do this.

Never let newly installed sod dry out.

Water lightly as small areas are completed.
