## Getting to Know Your New Lawn

### Bermuda

A resilient variety. This warm season grass is ready for all recreational activities with family and friends. Cultivated for its aggressive rooting characteristics, **Bermuda reaches deep into the soil to provide a dense, thick carpet that covers your lawn and withstands daily wear and tear.**

#### ATTRIBUTES

Fine blade,  
dense sod

#### SUNLIGHT

6-8 hours of sun

#### WATER

Medium to low  
once established

#### WEAR

Great for high-  
traffic areas

## CARING FOR YOUR BERMUDA LAWN

### SPRING

#### Maintenance

In early spring, rake up any debris. Use **Scotts® Turf Builder® Halts® Crabgrass Preventer with Lawn Food** if needed. Four weeks later, follow with **Scotts® Turf Builder® Weed and Feed** for a lush, green lawn. Fill in bare spots with **Harmony® sod**, available by the piece at your home improvement center.

#### Watering

During dormancy, water when there is no rain for 3-4 weeks to prevent dehydration. Especially if warm days are followed by cold ones, moisture keeps the lawn warm.

#### Mowing

Mow at about 1". Lower setting may scalp lawn.

### SUMMER

#### Maintenance

In early summer, feed with **Scotts® Turf Builder® Southern Lawn Food** to strengthen the lawn, helping it withstand heat and drought conditions. It slow-releases nutrients, making it the go-to fertilizer for all grass types.

#### Watering

Water deeply and infrequently. When the lawn appears dry, apply ¾-1" of water. A dark, bluish-gray color, foot printing, and wilted, folded or curled leaves indicate it's time to water.

#### Mowing

Mow at 1-2", depending on how often lawn is mowed and its condition.

### FALL/WINTER

#### Maintenance

In cooler weather, use a slow-release fertilizer like **Scotts® Turf Builder® WinterGuard® Fall Lawn Food**, to strengthen the lawn's roots. It feeds the lawn consistently and is better for the environment.

#### Watering

Water until the lawn becomes dormant. Especially if warm days are followed by cold ones, moisture keeps the lawn warm.

#### Mowing

Mow at 1" until weather cools. Raise mower to 2" when nighttime temperatures drop below 70 degrees to allow more leaf surface as it goes dormant.
